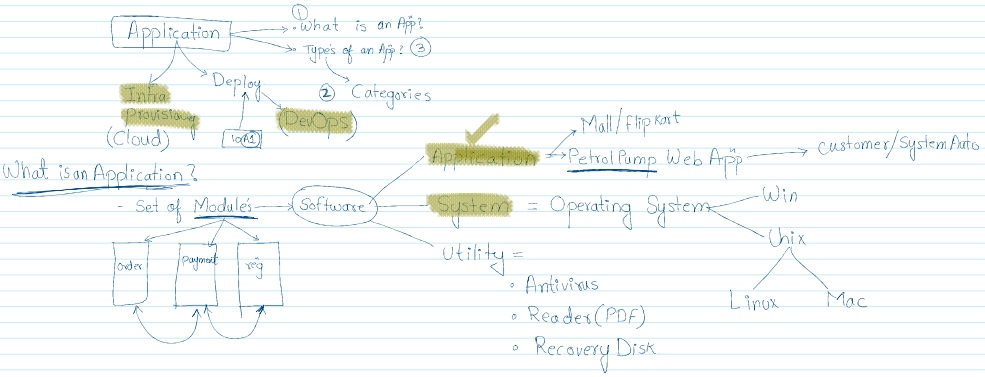
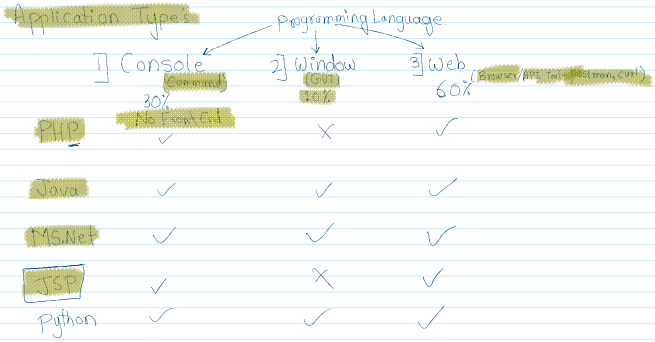
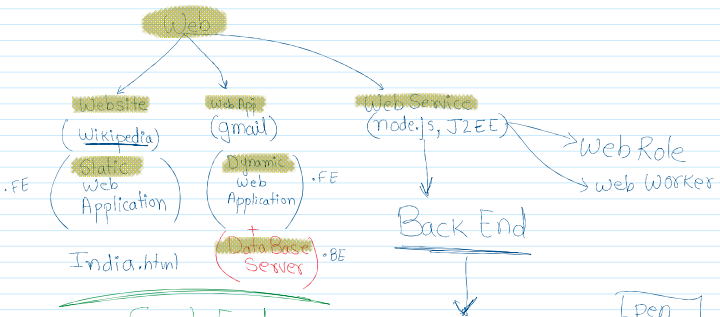
01.11Jul.Application Development Fundamentals

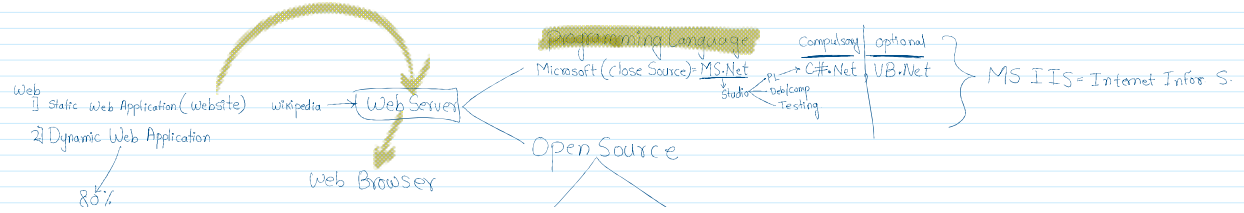
Tuesday, July 11, 2023 8:51 PM

- Overview of Application Development
- Various Types of Application
- Introduction to Databases
- Multi-tiered application architecture
- Overview of Monolithic and Microservices









2) Dynamic Web Application

80%

Web Browser

Open Source

Apache2

Nginx

Web App → Surf

C/D Engg

Cloud → Infra

DevOps

- Practices
- Automate → System

Logical

- Web Server
- Application Server
- DataBase Server

- Migration

on Prem → VM → Containers

Server

Virtualization → Hosting → Xen / KVM → use → Free / Shareable → Manage from Console

1 Web Server

Service, Client

- WebApp Run
- Front End (Face)
- HTML (Default) → Static WA/website

me.com → Jenkins → Master

Debian → Apache2 → HTTPD → Standard

RedHat → HTTPD → Standard

Nginx → Minimal → fastest → Module's

Nginx → WebApplication Run → static web App

→ PHP/Python → Module

2 DataBase Server

DBS

- Servers → Software, Tool
- DataBases → Bunch of file's
- Client → Tool Access DataBase value/sto..

Data → Schema → DataBase

Data Manipulation Language

DBase

CLI, GUI

API → General Method

Application Programming Interface

Embedded, IoT, Web, Mobile (And, Ios), Window

CLI, GUI, API

Command, click, PL

DataBase

Open Source → (Code is Available)

Close Source → (Microsoft) → MS Access (DesKtop), MS SQL Server (EnterPrise)

RDMS (Storage) (HDD)

- MySQL ✓
- Postgresql

In-Memory (RAM) (Memory)

- H2 ✓
- Sqlite

Server

Logical Server

- Software based Server.

Physical Server

- Hardware (Components)

Logical Server

- Software based Server

Specific Task

① Web Server = Apache2, HTTPD, Nginx

② Application Server = Web Logic, Web Spelbere

③ DataBase Server = MySQL, MS-SQL Server, Postgresql

④ Load Balancer Server = L7 (HTTP/HTTPS) → Content
L4

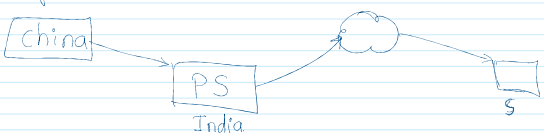
⑤ Proxy Server

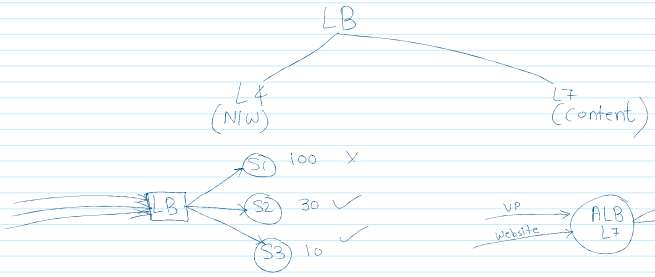
Physical Server

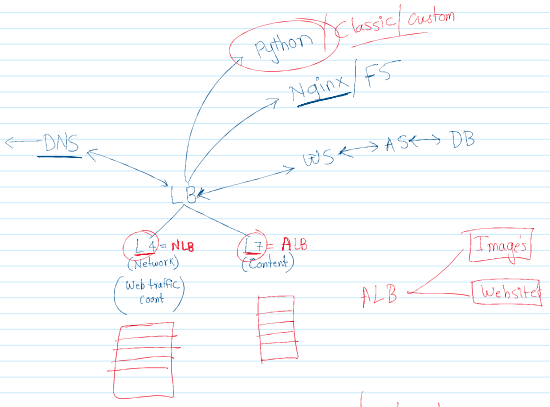
- Hardware Components

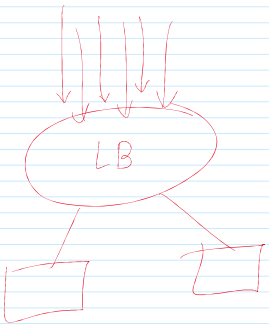
Rack ③ Workstation ① Blade ②

ALB



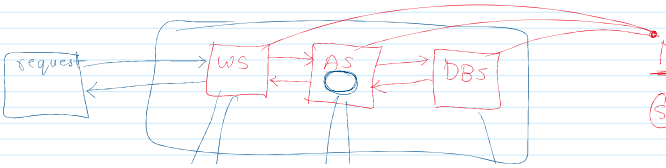






Application Server

- Business Logic (Processing)



N-Tier

Containerization

Micro.
